48- Presence of thermal fracture in the skull is diagn	ostic to ante-mortem burn
49- Contused lacerated wound is characterized by	
a) withit at bleeding	
c) Irregular edges	b) Crushed hair tips
50- Death of adult healthy cat was trapped under fall a) 1-2 days	len house may be
a) 1-2 days	b) 2.4.4
c) 5-10 days	b) 3-4 days
51- Cause of death from burns in open place after les a) Hematogenic shock	d) 20-25 days
	b) C. C.
c) Neurogenic shock	b) Suffocation
52- Surgical, self-inflicted, defense, homicidal, suicida a) Burn	d) Both c,b
a) Burn	and accidental are different manner for
c) Electricity	b) maised wound
53- All of the following are patterned abrasions EXCEF	d) Penetrating wound
a) Pressure abrasion	
c) Impact abrasion	b) Dragging abrasion
54- Death occurs in case of heat collapse usually due t	d) Human bite abrasion
a) Circulatory collapse	0
c) CNS damage	b) Asphyxia
55- Ante-mortem slaughter is diagnosed by	d) None of them
a) Presence of blood areas to	
a) Presence of blood around carcass, wound at n	b) Presence of bloody froth inside trachea, faint hypostasis
region and bluish colored hypostasis	hyperemic cut wound edges with gaping.
c) Presence of lacerated wound in neck region,	d) Presence of soot in tracker limit at
rapid formed rigor mortis and rapid PM cooling	d) Presence of soot in trachea, incised stab wound in neck regards separation between head and body.
6- One week old age abrasion is characterized by	
" I Coulde of Drown scan it removed by	b) Brown discolored center with yellowish margins
c) Falling of scab leaving rosy colored tissue	d) Complete healing without scar
7- Choose the wrong statement from the following.	, somplete nearing without scar
a) Absence of reflexes indicated brain store de ul	
c) Eventing it death	b) PM caloricity is increase.
C/ LAGITIDATION Of Call holp to date	and the state of t
C/ LAGITIDATION OF CALL holp to date to	The same of the sa
3- We can differentiate between heat hyperpyrexia an a) Measuring of body temperature	eath d) Blood inside vessels confirm livor mortis and exclude bruid heat exhaustion in recently died dog by
a) Measuring of body temperature c) Measuring of environmental temperature	eath d) Blood inside vessels confirm livor mortis and exclude bruid heat exhaustion in recently died dog by b) Measuring of blood pressure and pulse
a) Measuring of body temperature c) Measuring of environmental temperature is the direct mechanism of death in case of a	eath d) Blood inside vessels confirm livor mortis and exclude bruid heat exhaustion in recently died dog by b) Measuring of blood pressure and pulse
a) Measuring of environmental temperature c) Measuring of environmental temperature c) Measuring of environmental temperature a) Hemorrhage	b) Measuring of blood pressure and pulse d) All of them erebral hemorrhage.
a) Measuring of environmental temperature c) Measuring of environmental temperature c) Measuring of environmental temperature a) Hemorrhage c) Coma	eath d) Blood inside vessels confirm livor mortis and exclude bruid heat exhaustion in recently died dog by b) Measuring of blood pressure and pulse d) All of them erebral hemorrhage. b) Asphyxia
a) Measuring of environmental temperature c) Measuring of environmental temperature c) Measuring of environmental temperature a) Hemorrhage c) Coma	eath d) Blood inside vessels confirm livor mortis and exclude bruid heat exhaustion in recently died dog by b) Measuring of blood pressure and pulse d) All of them erebral hemorrhage. b) Asphyxia
a) Measuring of environmental temperature c) Measuring of environmental temperature c) Measuring of environmental temperature	d) Blood inside vessels confirm livor mortis and exclude bruid heat exhaustion in recently died dog by b) Measuring of blood pressure and pulse d) All of them erebral hemorrhage. b) Asphyxia d) Syncope vation after 48 hours.
a) Measuring of body temperature c) Measuring of environmental temperature c) Measuring of environmental temperature a) Hemorrhage c) Coma Animal loss the sensation of thirst during acute stary a) True c) After 3 days	d) Blood inside vessels confirm livor mortis and exclude bruing heat exhaustion in recently died dog by b) Measuring of blood pressure and pulse d) All of them erebral hemorrhage. b) Asphyxia d) Syncope ration after 48 hours. b) False
a) Hemorrhage c) Coma Animal loss the sensation of thirst during acute starv a) True c) After 3 days Length and differentiate between heat hyperpyrexia an animal loss the sensation of thirst between heat hyperpyrexia an animal loss the sensation of thirst during acute starv c) After 3 days Length and depth may differentiate between	d) Blood inside vessels confirm livor mortis and exclude bruid heat exhaustion in recently died dog by b) Measuring of blood pressure and pulse d) All of them erebral hemorrhage. b) Asphyxia d) Syncope vation after 48 hours.
a) Hemorrhage c) Coma Animal loss the sensation of thirst during acute starv a) True c) After 3 days Length and differentiate between heat hyperpyrexia an animal loss the sensation of thirst during acute starv c) After 3 days Length and depth may differentiate between	d) Blood inside vessels confirm livor mortis and exclude bruid heat exhaustion in recently died dog by b) Measuring of blood pressure and pulse d) All of them erebral hemorrhage. b) Asphyxia d) Syncope ration after 48 hours. b) False d) After 10 days
a) Measuring of body temperature c) Measuring of environmental temperature c) Measuring of environmental temperature a) Hemorrhage c) Coma Animal loss the sensation of thirst during acute starv a) True c) After 3 days Length and depth may differentiate between a) Crush and tear wound c) Burn and scald	d) Blood inside vessels confirm livor mortis and exclude bruing heat exhaustion in recently died dog by b) Measuring of blood pressure and pulse d) All of them erebral hemorrhage. b) Asphyxia d) Syncope vation after 48 hours. b) False d) After 10 days b) Hypostasis and contusion
a) Measuring of body temperature c) Measuring of environmental temperature c) Measuring of environmental temperature a) Hemorrhage c) Coma Animal loss the sensation of thirst during acute starv a) True c) After 3 days Length and depth may differentiate between a) Crush and tear wound c) Burn and scald	d) Blood inside vessels confirm livor mortis and exclude bruing heat exhaustion in recently died dog by b) Measuring of blood pressure and pulse d) All of them erebral hemorrhage. b) Asphyxia d) Syncope vation after 48 hours. b) False d) After 10 days b) Hypostasis and contusion
a) Hemorrhage c) Coma Animal loss the sensation of thirst during acute starv a) True c) After 3 days Length and depth may differentiate between a) Crush and scald c) Burn and scald could be detect time since detect detect heat hyperpyrexia an animal temperature c) Measuring of environmental temperature c) Measuring of environmental temperature c) Measuring of environmental temperature c) Coma a) Hemorrhage c) Coma c) Animal loss the sensation of thirst during acute starv a) True c) After 3 days Length and depth may differentiate between a) Crush and tear wound c) Burn and scald	d) Blood inside vessels confirm livor mortis and exclude bruing heat exhaustion in recently died dog by b) Measuring of blood pressure and pulse d) All of them erebral hemorrhage. b) Asphyxia d) Syncope ration after 48 hours. b) False d) After 10 days b) Hypostasis and contusion d) Stab and incised wound infested by
a) Measuring of body temperature c) Measuring of environmental temperature c) Measuring of environmental temperature a) Hemorrhage c) Coma Animal loss the sensation of thirst during acute starv a) True c) After 3 days Length and depth may differentiate between a) Crush and tear wound c) Burn and scald Acute exposure to non-ionizing radiation may be man a) Cancer and loss of hair	d) Blood inside vessels confirm livor mortis and exclude bruid heat exhaustion in recently died dog by b) Measuring of blood pressure and pulse d) All of them erebral hemorrhage. b) Asphyxia d) Syncope ration after 48 hours. b) False d) After 10 days b) Hypostasis and contusion d) Stab and incised wound nifested by
a) Measuring of body temperature c) Measuring of environmental temperature c) Measuring of environmental temperature a) Hemorrhage c) Coma Animal loss the sensation of thirst during acute starv a) True c) After 3 days Length and depth may differentiate between a) Crush and tear wound c) Burn and scald Acute exposure to non-ionizing radiation may be man a) Cancer and loss of hair c) Skin vesicles and teratogenicity	d) Blood inside vessels confirm livor mortis and exclude bruid heat exhaustion in recently died dog by b) Measuring of blood pressure and pulse d) All of them erebral hemorrhage. b) Asphyxia d) Syncope vation after 48 hours. b) False d) After 10 days b) Hypostasis and contusion
a) Hemorrhage c) Animal loss the sensation of thirst during acute starv a) True c) After 3 days Length and depth may differentiate between a) Crush and tear wound c) Burn and scald Acute exposure to non-ionizing radiation may be man a) Cancer and loss of hair c) Skin vesicles and teratogenicity Hypostasis is completed after	d) Blood inside vessels confirm livor mortis and exclude bruing heat exhaustion in recently died dog by b) Measuring of blood pressure and pulse d) All of them erebral hemorrhage. b) Asphyxia d) Syncope vation after 48 hours. b) False d) After 10 days b) Hypostasis and contusion d) Stab and incised wound infested by b) Skin ulceration, GIT bleeding edema in brain or large.
a) Hemorrhage c) After 3 days Length and depth may differentiate between a) Crush and tear wound c) Burn and scald Acute exposure to non-ionizing radiation may be man a) Cancer and loss of hair c) Skin vesicles and teratogenicity Hypostasis is completed after	d) Blood inside vessels confirm livor mortis and exclude bruind heat exhaustion in recently died dog by b) Measuring of blood pressure and pulse d) All of them erebral hemorrhage. b) Asphyxia d) Syncope ration after 48 hours. b) False d) After 10 days b) Hypostasis and contusion d) Stab and incised wound offested by b) Skin ulceration, GIT bleeding edema in brain or lung d) Nothing
a) Measuring of body temperature c) Measuring of environmental temperature c) Measuring of environmental temperature c) Measuring of environmental temperature a) Hemorrhage c) Coma Animal loss the sensation of thirst during acute starv a) True c) After 3 days Length and depth may differentiate between a) Crush and tear wound c) Burn and scald Acute exposure to non-ionizing radiation may be man a) Cancer and loss of hair c) Skin vesicles and teratogenicity Hypostasis is completed after a) 1-2 hours after death c) 8-10 hours before death	d) Blood inside vessels confirm livor mortis and exclude bruited heat exhaustion in recently died dog by b) Measuring of blood pressure and pulse d) All of them erebral hemorrhage. b) Asphyxia d) Syncope ration after 48 hours. b) False d) After 10 days b) Hypostasis and contusion d) Stab and incised wound nifested by b) Skin ulceration, GIT bleeding edema in brain or lung d) Nothing b) 3-4 hours before death
a) Hemorrhage c) Coma Animal loss the sensation of thirst during acute starv a) True c) After 3 days Length and depth may differentiate between a) Crush and tear wound c) Burn and scald Acute exposure to non-ionizing radiation may be man a) Cancer and loss of hair c) Skin vesicles and teratogenicity Hypostasis is completed after a) 1-2 hours after death c) 8-10 hours before death	d) Blood inside vessels confirm livor mortis and exclude bruing heat exhaustion in recently died dog by b) Measuring of blood pressure and pulse d) All of them erebral hemorrhage. b) Asphyxia d) Syncope ration after 48 hours. b) False d) After 10 days b) Hypostasis and contusion d) Stab and incised wound infested by b) Skin ulceration, GIT bleeding edema in brain or lung d) Nothing
a) Measuring of body temperature c) Measuring of environmental temperature c) Measuring of environmental temperature c) Measuring of environmental temperature a) Hemorrhage c) Coma Animal loss the sensation of thirst during acute starv a) True c) After 3 days Length and depth may differentiate between a) Crush and tear wound c) Burn and scald Acute exposure to non-ionizing radiation may be man a) Cancer and loss of hair c) Skin vesicles and teratogenicity Hypostasis is completed after a) 1-2 hours after death c) 8-10 hours before death	d) Blood inside vessels confirm livor mortis and exclude bruit heat exhaustion in recently died dog by b) Measuring of blood pressure and pulse d) All of them erebral hemorrhage. b) Asphyxia d) Syncope ration after 48 hours. b) False d) After 10 days b) Hypostasis and contusion d) Stab and incised wound nifested by b) Skin ulceration, GIT bleeding edema in brain or lung d) Nothing b) 3-4 hours before death

65- 0	Cadaveric spasm affect	
05 0	a) Voluntary muscles	b) Involuntary muscles
1	c) Both a,b	d) Cadaveric muscles
66- 0	Complete absence of food in GIT indicate death from c	T
	a) True	b) False
67- C	Correct order for internal organs putrefaction in female	
	a) Brain – Stomach – liver – Heart – prostate	b) Larynx – Brain – liver – lung – non gravid uterus
-	c) Liver – Intestine – Kidney – Heart – Larynx	d) All internal organs putrefy at the same time
68- V	Ve can differentiate between antemortem and postmo	ortem wounds by
	a) Presence of soot and carboxy Hb	b) Hair tip examination
140	c) Inflammatory and healing process	d) Both c,b
69- /	All of the following conditions retard formation of adip	ocere EXCEPT
	a) Cold weather	b) Running water
	c) Starvation	d) Hot climate
70- F	lame travel to distance equal to 1/2 length of weapon	barrel causing burn around inlet wound.
	a) True	b) False
71- A	brasions can be confused with	
	a) Eczema	b) Contusion
	c) Chemical burn	d) Scald
72- A	all of the following are correct about primary flaccidity	EXCEPT
1	a) Respond to electric stimuli	b) Muscles still in molecular life
	c) Take place due to ATP depletion in muscles	d) Its duration about 1-2 hours after death
73 - R	igor mortis may confused with	
*	a) Cold stiffness	b) Gas stiffness
	c) Heat stiffness	d) All of them
74- F	orensic entomology deal with	4
2	a) Dentition	b) Insects of cadaver
	c) Firearm weapons	d) Determination the cause of death
75-		يجب أن يتميز الطبيب الشرعي بالذكاء و قوة الملاحظة و العلم الواسع و مراقبة الأ
3	a) True	b) False
-		l-i

El Menoufia University **Faculty of Veterinary Medicine** Forensic Medicine Exam, 2020/2021

Date: 12.6.2021

Time allowed: 2 Hours

Choose the correct answer from (a), (b), (c) or (d) for each of the following 75 questions

of the following are sure signs of death EXCEPT a) Complete flaccidity	b) livor mortis
	d) Absonce of light reflex in eve pupils.
is the most accurate method to determine t	time elapsed after death in cadaver of cow died from anthrax
environmental temperature around 37 degree.	
a) Rate of cooling	b) Extend of rigor mortis
c) Determination of vitreous potassium level	d) Examination of Gastrointestinal content emptying
is considered as one of the earliest change	
	b) Retinal vessels fragmentation
a) Rigor mortis c) Secondary muscular flaccidity	d) Cooling of the body
/here does the contused wound appear similar to in	
	b) Gluteal region
a) Head	d) All of them
c) Abdomen	ealthy animal and is usually caused by In birds
a) Somatic death / heart failure	b) Brain death / cerebral hemorrhage
c) Sudden death / infectious disease	d) Coma / asphyxia
is the most recent artificial identification methods	
	b) Ear tag
a) Freeze numbering	d) Tattooing
c) Microchips implant	
Depth of stab wound is equal to length of weapon. a) True	b) False the early morning. Some cadavers showed burn and singed hairs we have a send magnetization of magnetization of magnetization of magnetization.
Depth of stab wound is equal to length of weapon. a) True A group of cows in open place are founded dead in bleeding from nose and ears. Another group were voljects (used for identification) in neck region. Sus	the early morning. Some cadavers showed burn and singed hairs without any apparent signs except smelting and magnetization of
Depth of stab wound is equal to length of weapon. a) True A group of cows in open place are founded dead in bleeding from nose and ears. Another group were voljects (used for identification) in neck region. Sus a) Big fire in the farm	the early morning. Some cadavers showed burn and singed hairs without any apparent signs except smelting and magnetization of
Depth of stab wound is equal to length of weapon. a) True A group of cows in open place are founded dead in bleeding from nose and ears. Another group were voljects (used for identification) in neck region. Sus a) Big fire in the farm	the early morning. Some cadavers showed burn and singed hairs without any apparent signs except smelting and magnetization of magneted cause of death is b) Sun stroke of hyperpyrexia type d) Solar radiation
Depth of stab wound is equal to length of weapon. a) True A group of cows in open place are founded dead in bleeding from nose and ears. Another group were volgects (used for identification) in neck region. Sus a) Big fire in the farm c) Lightning strike Supra-renal insufficiency is possible mechanism of comparison.	the early morning. Some cadavers showed burn and singed hairs without any apparent signs except smelting and magnetization of magnetization of magnetization of magnetization of magnetization of magnetization b) Sun stroke of hyperpyrexia type d) Solar radiation death after
a) True A group of cows in open place are founded dead in bleeding from nose and ears. Another group were vobjects (used for identification) in neck region. Sus a) Big fire in the farm c) Lightning strike Supra-renal insufficiency is possible mechanism of c a) Trauma in abdominal region	the early morning. Some cadavers showed burn and singed hairs without any apparent signs except smelting and magnetization of magneted cause of death is b) Sun stroke of hyperpyrexia type d) Solar radiation death after b) Burn
Depth of stab wound is equal to length of weapon. a) True A group of cows in open place are founded dead in bleeding from nose and ears. Another group were volgects (used for identification) in neck region. Sus a) Big fire in the farm c) Lightning strike Supra-renal insufficiency is possible mechanism of comparison.	the early morning. Some cadavers showed burn and singed hairs without any apparent signs except smelting and magnetization of magneted cause of death is b) Sun stroke of hyperpyrexia type d) Solar radiation death after b) Burn d) Both b,c
Depth of stab wound is equal to length of weapon. a) True A group of cows in open place are founded dead in bleeding from nose and ears. Another group were vobjects (used for identification) in neck region. Sus a) Big fire in the farm c) Lightning strike Supra-renal insufficiency is possible mechanism of comparison and another production of Starvation c) Starvation is defined as aseptic digestion of tissue after	the early morning. Some cadavers showed burn and singed hairs without any apparent signs except smelting and magnetization of magneted cause of death is b) Sun stroke of hyperpyrexia type d) Solar radiation death after b) Burn d) Both b,c death by endogenous enzymes
a) True A group of cows in open place are founded dead in bleeding from nose and ears. Another group were vobjects (used for identification) in neck region. Sus a) Big fire in the farm c) Lightning strike Supra-renal insufficiency is possible mechanism of c a) Trauma in abdominal region c) Starvation c. Starvation d. Starvation d. Starvation d. Decomposition	the early morning. Some cadavers showed burn and singed hairs without any apparent signs except smelting and magnetization of magneted cause of death is b) Sun stroke of hyperpyrexia type d) Solar radiation death after b) Burn d) Both b,c death by endogenous enzymes b) Molecular death
Depth of stab wound is equal to length of weapon. a) True A group of cows in open place are founded dead in bleeding from nose and ears. Another group were volgects (used for identification) in neck region. Sus a) Big fire in the farm c) Lightning strike Supra-renal insufficiency is possible mechanism of comparts and abdominal region c) Starvation	the early morning. Some cadavers showed burn and singed hairs without any apparent signs except smelting and magnetization of
Depth of stab wound is equal to length of weapon. a) True A group of cows in open place are founded dead in bleeding from nose and ears. Another group were vobjects (used for identification) in neck region. Sus a) Big fire in the farm c) Lightning strike Supra-renal insufficiency is possible mechanism of call a) Trauma in abdominal region c) Starvation	the early morning. Some cadavers showed burn and singed hairs without any apparent signs except smelting and magnetization of
Depth of stab wound is equal to length of weapon. a) True A group of cows in open place are founded dead in bleeding from nose and ears. Another group were vobjects (used for identification) in neck region. Sus a) Big fire in the farm c) Lightning strike Supra-renal insufficiency is possible mechanism of comparts and abdominal region c) Starvation	the early morning. Some cadavers showed burn and singed hairs without any apparent signs except smelting and magnetization of magnetization of magnetization of magnetization of magnetization of magnetization death after b) Sun stroke of hyperpyrexia type d) Solar radiation death after b) Burn d) Both b,c death by endogenous enzymes b) Molecular death d) All of them
Depth of stab wound is equal to length of weapon. a) True A group of cows in open place are founded dead in bleeding from nose and ears. Another group were vobjects (used for identification) in neck region. Sus a) Big fire in the farm c) Lightning strike Supra-renal insufficiency is possible mechanism of case and an another properties of the strain of the stra	the early morning. Some cadavers showed burn and singed hairs without any apparent signs except smelting and magnetization of
a) True A group of cows in open place are founded dead in bleeding from nose and ears. Another group were vobjects (used for identification) in neck region. Sus a) Big fire in the farm c) Lightning strike Supra-renal insufficiency is possible mechanism of c a) Trauma in abdominal region c) Starvation c) Starvation c) Autolysis Radiation burn is characterized by a) Blackening and mineralization c) Ulceration surrounded by erythema c-4th degree of	the early morning. Some cadavers showed burn and singed hairs without any apparent signs except smelting and magnetization of magnetization of magnetization of magnetization of magnetization of magnetization of magnetization death after b) Sun stroke of hyperpyrexia type d) Solar radiation death after b) Burn d) Both b,c death by endogenous enzymes b) Molecular death d) All of them b) Presence of vesicles containing albumen (2 nd degree) d) Soot in trachea and high carboxy Hb content in blood but easily differentiate by examination.
a) True A group of cows in open place are founded dead in bleeding from nose and ears. Another group were wobjects (used for identification) in neck region. Sus a) Big fire in the farm c) Lightning strike Supra-renal insufficiency is possible mechanism of carrow a) Trauma in abdominal region c) Starvation	the early morning. Some cadavers showed burn and singed hairs without any apparent signs except smelting and magnetization of magnetization of magnetization of magnetization of magnetization of magnetization death after b) Sun stroke of hyperpyrexia type d) Solar radiation death after b) Burn d) Both b,c death by endogenous enzymes b) Molecular death d) All of them b) Presence of vesicles containing albumen (2 nd degree) d) Soot in trachea and high carboxy Hb content in blood but easily differentiate by examination.
Depth of stab wound is equal to length of weapon. a) True A group of cows in open place are founded dead in bleeding from nose and ears. Another group were vobjects (used for identification) in neck region. Sus a) Big fire in the farm c) Lightning strike Supra-renal insufficiency is possible mechanism of comparison and an abdominal region c) Starvation	the early morning. Some cadavers showed burn and singed hairs without any apparent signs except smelting and magnetization of
Depth of stab wound is equal to length of weapon. a) True A group of cows in open place are founded dead in bleeding from nose and ears. Another group were vobjects (used for identification) in neck region. Sus a) Big fire in the farm c) Lightning strike Supra-renal insufficiency is possible mechanism of composition c) Starvation 1 is defined as aseptic digestion of tissue after a) Decomposition c) Autolysis 1- Radiation burn is characterized by a) Blackening and mineralization c) Ulceration surrounded by erythema 2- 4 th degree of and	the early morning. Some cadavers showed burn and singed hairs without any apparent signs except smelting and magnetization of
Depth of stab wound is equal to length of weapon. a) True A group of cows in open place are founded dead in bleeding from nose and ears. Another group were vobjects (used for identification) in neck region. Sus a) Big fire in the farm c) Lightning strike Supra-renal insufficiency is possible mechanism of composition c) Starvation O	the early morning. Some cadavers showed burn and singed hairs we without any apparent signs except smelting and magnetization of mespected cause of death is b) Sun stroke of hyperpyrexia type d) Solar radiation death after b) Burn d) Both b,c death by endogenous enzymes b) Molecular death d) All of them b) Presence of vesicles containing albumen (2 ^{Not} degree) d) Soot in trachea and high carboxy Hb content in blood but easily differentiate by examination. b) Burns — scald — cloths d) Electric burn — thermal burn - cloths

14- P	utrefaction is accelerated by and retarded by	
	a) Wounds / emaciation	b) Adipocere / mummification
	c) loss of blood / freezing	d) Warmness / infection
15 - C	choose the wrong statement from the following.	
(1) 6 S	a) Hypostasis is of low forensic value in animals	b) Efflux of Ca from sarcoplasmic reticulum promote rigor mortis
		d) Hypostasis seen externally and also internally
16 - T	he most characteristic findings on fired bullet is	which seen by naked eye.
	a) Needle mark on percussion cap	b) Primary rifling marks
	c) Secondary rifling scratches	d) All of them
17- A	All of the following are correct for rigor mortis in hors	e EXCEPT
	a) Occur due to formation of rigid bond between	b) Begin after 3-4 hours and disappear after 36-48 hours from
	lectins muscle filaments	death in winter
	c) It follow and followed by flaccidity	d) Muscles did not respond to electric stimuli
18- (choose the correct statement from the following	
	a) Unawareness and spontaneous respiration are signs to cortical brain death.	 b) Hypostasis is PM bluish discoloration begin to appear in lowe compressed part after 2 hours.
	c) Muscles has the longest molecular life in the body.	d) Eggs of flies are usually detected in cadaver orifices after 48 hours since death in the summer.
19 - S	Site of abrasions in the body usually indicate	
	a) Type of causative agent	b) Type of crime
	c) Its pattern	d) Violence
20	is the main cause of death after weak trauma in	epigastric region.
	a) Stomach rupture	b) Internal contusion
	c) Heart failure	d) All of them
21	is wound usually take the shape of cross section	n of the used instrument.
	a) Punctured wound	b) Firearm wound
	c) Contused wound	d) Incised wound
22	is the first organ shows stiffness after death in fo	emale, while Is the first part putrefied in male.
	a) Uterus / Prostate	b) Cornea / Intestine
	c) Tongue / Liver	d) Heart / larynx
23	is the main cause of death due to anemia, hypoth	nermia, convulsion and cyanide poisoning
	a) Asphyxia	b) Cold stiffness
	c) Vagal shock	d) Heart faliure
24-1	Excessive hemorrhage is usually considered as	
	a) Cause of death	b) Mechanism of death
	c) Manner of death	d) All of them
25- :	Site of bruise usually reflect site of applicable violenc	e.
	a) True	b) False
26-	Secondary flaccidity usually begins after PM in r	mature dogs due to in summer season.
	a) 36-48 hrs / effect of putrefactive bacteria	b) 1-2 hrs / nervous paralysis
	c) 24-36 hrs / effect of hyperthermia	d) 2-3 hrs / break down of muscle protein
27-	Greenish discoloration of contusion indicate	
	a) Infection	b) Beginning of putrefaction
	c) One week old trauma	d) Nothing
28-	Linear scratches are produced when pointed object of	
	a) True	b) False
29-	is responsible for adipocere formation which c	
	a) Fat / 6 months	b) Death under water/ 3 months
	c) Skin / one month	d) Saponification / 1-2 year
30-	Tissue bridging differentiate between	
-	a) Burn and scald	b) cut and stab wound
	c) cut and contuced wound	d) contusion and hypostasis

The most characteristic finding of fired cartridge is	b) Needle mark on percussion cap
a) Empty of its content	d) Rusty scratches
c) Rifling marks	م) Rusty strattnes من المجروح التي تلتنم في مدة زمنية أقل من ٢٠ يوم تاركة اثر دائم أو إع
الجروح الخطيرة (a)	الجروح البسيطة (ط
الجروح ذات الاعاقة (c	d) leque of the contract of th
- Ventricular fibrillation is the main mechanism of deat	
a) Electric current	b) Cold
c) Starvation and thirst	d) High environmental temperature
 In winter season (10 °C), the 1st measurement of re 	ctal temperature in a carcass of cow was 30 °C. After one hour, the
2 nd measurement of rectal temperature was 28°C. E	xpected time elapsed since death is
a) 1-2 hours	b) 4-5 hours
c) 10-12 hours	d) 6-8 hours
5- A carcass of dog was extracted from river in winter s	eason. Examination revealed strong mandibular closure over aquatic
weeds and mud, while all body was warm (37 °C) ar	nd in complete flaccid condition. This stiffness seems to be
a) Beginning of rigor mortis	b) Cold stiffness
c) Normal mandibular stiffness	d) Cadaveric spasm
5- Post-mortem contusion characterized by absence of	r inflammatory and nealing reactions.
a) True	b) False
7- Rigor mortis appear due to	Live of leating acid in muscles
a) Coagulation of muscle protein	b) Accumulation of lactic acid in muscles
c) Depletion of ATP production	d) Both a,b
8- In bodies died in very hot and dry climate.	b) Cadaver loss water and shrunken within weeks
a) Putrefaction is delayed for 2-3 days	b) Cadaver loss water and shrunken within weeks
c) Fat is converted into solid greasy masses	d) The sure cause of death is sun stroke
9- Third degree of burn characterize by and is ass	ociated with incidence of
a) Destruction of s/c tissue – Hypovolemic shock	b) Vesicle formation – Infection
c) Destruction of epidermis only - Pain shock	d) Destruction of dermis only – Haematogenic shock
10- Decomposition in water is in air due to	in water
a) Faster than / Presence of fish	b) Slower than / formation of adipocere
c) Slower than / Low temperature	d) Faster than / Aquatic microorganisms
11- Brown atrophy of the heart is characteristic lesion f	or death from
a) Radiation	b) Brown disease
c) Heat syncope	d) Starvation
12 cause delay hypostasis formation, while	prevent its occurrence at all.
a) Hemorrhage - Infection	b) Anemia - Freezing
c) Change of position after death – profuse hemo	orrhage d) Cold climate - mumminication
13 is manifested by greenish visualization of super	ficial vessels on abdomen or chest within 2 days after death in summe
a) Lightening strike	b) Putrefaction
c) Mineralization	d) All of them
44- The presence of internal wad inside the wound ind	icate that
a) The used weapon was smooth bore	b) The used weapon is filled weapon
c) The wound is fabricated	d) The wound is ante-mortem
45- Molecular life is	
a) Life of molecules inside the cells	b) Life of cells after death
c) Life of cells before death	d) None of them
46- Caliper of smooth bore weapons is	
a) Diameter of bullet	b) Internal diameter of smooth barrel
) at the medicat destructive nower of weapon	d) Number expressed on the base of cartridge
47- Infection may expected to be the cause of death in	n animal died after from high degree of burn.
a) 2-3 hours	b) 1-2 days
c) 3-5 days	d) 30 days

a) True	in the skull is diagnostic to ante-mortem burn.
49- Contused lacerated wound	b) False
a) Minimal bleeding	
c) Irregular edges	b) Crushed hair tips
50- Death of adult healthwart	
a) 1-2 days	d) All of them s trapped under fallen house may be expected after
c) 5-10 days	b) 3-4 days
51- Cause of death from home	d) 20-25 days
a) Hematogenic shock	d) 20-25 days open place after less than 2 hours includes
c) Neurogenic shock	b) Suffocation
52- Surgical solf indicated to	d) Both c,b
a) Rurn	d) Both c,b e, homicidal, suicidal and accidental are different manner for
	b) Incised wound
c) Electricity	
53- All of the following are patter	ed abrasions EXCEPT
a) Fressure abrasion	b) Dragging abrasion
c) Impact abrasion	
54- Death occurs in case of heat	llapse usually due to
a) Circulatory collapse	b) Asphyxia
c) CNS damage	
55- Ante-mortem slaughter is die	nosed by
a) Presence of blood arour	carcass wound at need. b) p
region and pluish colored	nostacis
c) Presence of lacerated w	and in neck region
Tapid formed rigor mortis	d rapid PM cooling
o One week old age abrasion is	naracterized by
a) Presence of brown scab	removed bled again 1175
c) railing of scab leaving ro	colored tissue
7- Choose the wrong statement	om the following
a) Absence of reflexes indicate	ed brain stem dooth
c) Examination of GIT help	detect time sings I will be a series of the carcass calories due to over
8- We can differentiate betweer	eat hyperpyrexia and heat exhaustion in recently died dog by
a) Measuring of body temp	ature Landauton in recently died dog by
c) Measuring of environme	al temporature by Measuring of blood pressure and pulse
9 is the direct mechanism	of death in case of cerebral hemorrhage.
a) Hemorrhage	a court in case of cerebral nemorrhage.
c) Coma	b) Asphyxia
- Animal loss the sensation of th	d) Syncope st during acute starvation after 48 hours .
a) True	A during acute starvation after 48 hours.
c) After 3 days	b) False
- Length and depth may differer	d) After 10 days
a) Crush and tear wound	
c) Burn and scald	b) Hypostasis and contusion
- Acute exposure to pop ionizing	
a) Cancer and loss of hair	duation may be manifested by
c) Skin vesicles and torrets	b) Skin ulceration, GIT bleeding edema in brain or lung
c) Skin vesicles and teratoge Hypostasis is completed after	d) Nothing
a) 1-2 hours after death	
c) 8-10 hours be c	b) 3-4 hours before death
c) 8-10 hours before death	No.
Is one of the immediate s	n of death
a) Loss of skin elasticity c) Contact flattening	b) Cooling of the body

65- Ca	adaveric spasm affect	
	a) Voluntary muscles	b) Involuntary muscles
	c) Both a,b	d) Cadaveric muscles
66- Co	omplete absence of food in GIT indicate death from	chronic starvation.
	a) True	b) False
67- Cc	orrect order for internal organs putrefaction in fema	le (from early to late)
	a) Brain – Stomach – liver – Heart – prostate	b) Larynx – Brain – liver – lung – non gravid uterus
	c) Liver – Intestine – Kidney – Heart – Larynx	d) All internal organs putrefy at the same time
68- W	Ve can differentiate between antemortem and postr	nortem wounds by
	a) Presence of soot and carboxy Hb	b) Hair tip examination
	c) Inflammatory and healing process	d) Both c,b
69- A	All of the following conditions retard formation of ad	ipocere EXCEPT
	a) Cold weather	b) Running water
	c) Starvation	d) Hot climate
70- F	lame travel to distance equal to 1/2 length of weapo	on barrel causing burn around inlet wound.
	a) True	b) False
71- A	Abrasions can be confused with	
	a) Eczema	b) Contusion
	c) Chemical burn	d) Scald
72- A	All of the following are correct about primary flaccidi	ty EXCEPT
	a) Respond to electric stimuli	b) Muscles still in molecular life
	c) Take place due to ATP depletion in muscles	d) Its duration about 1-2 hours after death
73- R	Rigor mortis may confused with	
14	a) Cold stiffness	b) Gas stiffness
	c) Heat stiffness	d) All of them
74- F	Forensic entomology deal with	
	a) Dentition	b) Insects of cadaver
	c) Firearm weapons	d) Determination the cause of death
75-	<i>بزو</i> جل و أن يكون هدفه فقط هو تحقيق المعدالة	يجب أن يتميز الطبيب الشرعي بالذكاء و قوة الملاحظة و العلم الواسع و مراقبة الله ع
	a) True	b) False

2012

Menoufia University

Faculty of Veterinary Medicine

Date: 22.6.2021

Time Allowed: 2 Hours

- a- Less amount of the drug is used.
- c- Causing unconsciousness

- b- Produce large enough desensitized area
- d- Used for surgery on standing position.

484 Enucleation of the eyeball might be performed at the effect of

- a- Cornual nerve block b- Supraorbital nerve block c- Infraorbital nerve block d- All the above
- 49- Incision of old hematoma at the perineum in donkey might be performed under the effect of
 - a- Surface analgesia b- Posterior epidural analgesia c- Anterior epidural

50- Epidural analgesia in sheep is performed at space

- a- Thoracolumbar
- b- Lumbosacral
- c- 1st intercoccygeal
- d- Sacrococcygeal

Choose (a) if the statement is true or (b) if False

- 51- Prolonged fasting of animal before anesthesia increase the susceptibility to toxicity.
- 52- The maximum infiltration dose of lignocaine in cattle is about 30 ml of 2% solution
- 53- Local infiltration analgesia should never be carried out through infected or inflamed tissue
- 54- Inverted L-field block achieve complete analgesia and muscle relaxation of the deeper layer of the abdominal wall.
- 55- Skin analgesia of over the tail and crop and relaxation of anal sphincter are from features of anterior epidural analgesia.
- 56- Anterior epidural analgesia in horse is contraindicated for it causes severe hypotension and shock.
- 57- Mental nerve block applied for suturing of lower eyelid wound.
- 58- Chloral hydrate is suitable for basal narcosis in dog.
- 59- Retrobulbar nerve block in cattle achieved through introduction of the needle through supraorbital fossa.
- 60- Deep Narcosis in 400 kg b.wt horse achieved through injection of 20 g of chloral hydrate.
- 61- Akinesia of the upper eyelid achieved through auriculopalpebral nerve block.
- 62-Supraorbital nerve block in cattle could be achieved through 4 point block.
- 63- Basal Narcosis causing progressive depression of CNS system and the animal become unconscious but still responds to external stimuli.
- 64- Basal Narcosis is indicated for hepatic and renal patients.
- 65- Lethal dose of chloral hydrate in equine is within 17 mg/50 kg b.wt.
- 66- Low Palmar & Palmar Metacarpal nerve block achieved at 3 cm below fetlock joint.
- 67- All the manus could be blocked by median and ulnar nerve block together.
- 68- Hock lameness is perfectly diagnosed by Low Planter & Planter Metatarsal nerve block.
- 69- Field block producing walls of anesthesia enclosing the surgical field.
- 70- The dose of 2% lignocaine Hcl for IVRA is 3-10 in cattle.
- 71-Supraorbital nerve block is efficient for trephining of the facial sinus in equine.
- 72-Infraorbital nerve block is efficient in order to relief blepharospasm.
- 73- Navicular syndrome might be diagnosed through palmer digital nerve block.
- 74- The motor control of the hind limbs is uninfluenced in anterior epidural nerve block.
- 75-Vomiting or seven retching in dog might be occur after sedation using Xylazine.

Good Luck

Marks	25 Marks			

All quistions should be answered:

b- false

a- true

	quistions should be answered.
Ch	oose the correct answer:
1-	All of them are epitheliotropic viral diseases except
	a- Pox b- FMD C- Vesicular stomatitis d- Rabies
2-	Lumpy Skin Disease induce Eosinophilic IC/IB in the epidermal cells.
	a- true b- false
3-	is a disease of swine causing reproductive problems and nervous signs in newborn pigs.
	a- Classical swine fever b- swine erysipelas c-Pseudorabies d- FMD
4-	red spot at which pox virus replicates causing epidermal hyperplasia and sub epidermal edema.
	a- Macule b- Papules c- Vesicles d- pustule
5-	I B R virus infection induce eosinophilic IN/IB in the lining epithelium of nasal passage and trachea.
	a- true b- false
6-	The aborted fetus in case of Equine Viral Rhinopneumonitis has congested and necrosed liver with IC/IB
	Bronchopneumonia and hydrothorax also occurred.
٠	a- true b- false
7-	is classified into peracute, intestinal, head-eye and mild forms according to antemortem findings
	a-IBR b- MCF c- FMD D- BVD
8-	is vesicular disease outbreak in cattle with lameness and high mortalities among calves.
	a-IBR b- MCF c- FMD D- BVD
9-	Pseudorabies induce IN/IB in neuron and glial cells. Focal necrosis with IC/IB in pharyngeal mucosa
f	lymph nodes, liver, lungs, and adrenal cortex.
	a- true b- false
10	-Tiger heart is the pathognomonic lesion for FMD in the heart of young horse and represented by
	coagulative necrosis in the wall and septum of left ventricle.
	a- true b- false
11	- The mechanism of injury in bluetongue is dysfunction and lysis of mesothelial cells.
	a- true b- false
12	- Last portion of the large intestine are hemorrhagic showing zebra marking of longitudinal folds in
	a- Pox b- FMD c- Vesicular stomatitis d- Cattle plague
13	-Canine Infectious Hepatitis cause coagulative necrosis in the liver large basophilic IN/IB in hepatic and
	Kupffer cells adjacent to necrosis.
	a- true b- false
14	acute viral disease of cattle and buffalo characterized by corneal opacity, profuse nasa
	discharge, and enlargement of lymph nodes.
	a-IBR b- MCF c- FMD D- BVD
15	-IBR virus infection has four forms of the disease: respiratory, genital, digestive and neonatal.

	and inducing edome
	and inducing edema.
2	a- true b- false
	17- edema, petechial hemorrhages and thrombosis are characteristic for Equine Viral Arteritis. This
	affects lymphatics inducing necrosis and infla mmarion with increase the permeability.
	a- true b- false
	18- syncytial giant cells contain eosinophilic IC/IE and may contain IN/IB are characteristic for
	C- MCH d- Cattle 1
	19- Bovine leukosis is a persistent and malignant viral disease at the musculoskeletal system
	o raise
	20- The cause of death in AHS is dyspnea and cardiac failure.
	- Taise
	21-Lymph node enlargement, splenomegaly and neoplastic lesions in all organs are characteristic for
	22- Cytopathogenic BVDV causes bovine viral diarrhea while Non-cytopathogenic BVDV causes mu disease.
w.	a- true b- false
	23- Cowpox virus infection induce basophilic intracytoplasmic inclusion bodies.
	a- true b- false
	24induce Lymphocytic vasculitis in all organs with fibrinoid nendothelial swelling of the internal and infiltration after the swelling of th
	in plasma construction of the adventitio with I plasma cons
	a-IBR b- MCF c- FMD D- BVD
	25- Lumpy Skin Disease is acute pox viral disease of buffalo manifested with sudden appear ance of nodules.
	o idioc
	26- The turkey egg appearance in kidney of young pigs is characteristic for
	27-In subacute form of African Ham Side and Swine fever consequences of FMD
	27- In subacute form of African Horse Sickness there is edema in S/C tissue of the head and neck.
	28-Bovine leukosis do not transcribe.
	28-Bovine leukosis do not transmitted by vertical transmission. a- true b- false
	29-CAdV-1 responsible for nothed and a
	29-CAdV-1 responsible for pathologic features of edema, serosal hemorrhage, and hepatic necrosis in dog.
	30-Scrapie is a chronic disease with some 1
	30-Scrapie is a chronic disease with very characteristic gross lesions in sheep. a- true b- false
	31-Bluetongue cause generalized vasculities
	31-Bluetongue cause generalized vasculitis, edema and hemorrhage of subcutaneous tissue and musculature in the head and neck.
	a- true b- false
1	32-Councilman bodies are seen in the liver cells in case of
	. "BID (-RVF 1 IDD
3	33- Suppurative meningoencephalitis is characteristic for Classical swine fever. a- true b- false
	a- true b- false

34-Hyaline degeneration and coagulative necrosis in the heart (wall and septum of left ventricle) in young	
acutely infected animals with MCF is the cause of death.	
a- true b- false	
35 characterized by erosions on the buccal mucosa, Severe congestion, and hemorrhage in the	
intestine. The Peyer's patches are necrotic, and then sloughed leaving ulcerated mucosa.	
a- Pox b- IBR c- MCF d- Cattle plague	
36-The aborted fetus in case of IBR has Diffuse hemorrhages and coagulative necrosis liver, spleen, kidneys,	
and lymph nodes with eosinophilic IN/IB in the hepatic cells.	
a- true b- false	
37 is a viral disease of <i>ruminants</i> , <i>swine</i> and horses characterized by vesicular lesions of the mouth,	
feet and teat.	
a-IBR b- FMD c- BVD d- Vesicular stomatitis	
38- In BVD infectionserve as portal of entry by tacking the viruses from the gut and transport	-
it to the gut associated lymphoid tissues.	
a-Red blood cells b- platelets c- M (microfold) cells d- endothelial cells	
39- The spleen is not affected in blue tongue affected sheep.	
a- true b- false	1
40-The mucosal disease infected the cattle during embryogenesis and penetrates the uterus to fetus and	•
become immunotolerant.	
a- true b- false	
41- Equine Viral Arteritis virus is only transmitted among horses via respiratory secretions.	
a- true b- false	n.
42 manifested with hepatitis and high mortality in young lambs and calves, and storm of abortion	
in adult animals.	
a-DVD 0 MB	
43-Bovine leukosis is only observed in <i>sporadic</i> forms.	
a- true b- false 44- Horse with yellow mucus membranes and hemosiderosis in all organs with petechial hemorrhages or	n
44- Horse with yellow mucus memoranes and nemosiderosis in an organis was produced and nemosiderosis and nemosi	
Frenulum linguae are characteristic for	
a-Equine infectious anemia b- Equine Viral Arteritis c- horse pox d- Equine Viral Abortion 45- Diffuse coagulative necrosis of the hepatic cells with IN/IB are characteristic for RVF.	
a- true b- false 46- chronic disease of the central nervous system in sheep with long incubation period.	
DOD 1 December 2	
a-Rabies b- OSE c- BSE d- Pseudorables 47- Edema and hemorrhages in all parts of horse body especially the eye are characteristic for	
2 Equipe infectious anemia b- Equipe Viral Arteritis c- horse pox d- Equipe Viral Abortion	
a-Equine infectious anemia b- Equine Viral Arteritis c- horse pox d- Equine Viral Abortion 48- Bilateral spongiform appearance in brain stem with cerebellar atrophy in cattle resulted from	
1 ~ 1 11	
a-Rabies b- OSE c- BSE d- Pseudorabies 49- CAdV-1 has special tropism for endothelium, mesothelium, and hepatic parenchyma.	
1 0 1	
a- true b- false 50- Amyloid plaques are found in the molecular and granular layers of the cerebellum in scrapie.

Food Hygiene and Control Department

Milk Hygiene and control Exam.

4th Year students, 2nd Semester

Date: 8 / 6 / 2021

Time: 2hr

Part 1

 Q1. Butter is not an ideal medium for the growth of microorganisms, especially for the pathogens. Q2. Sandiness is a defect in ice cream due to slow cooling. Q3. Gelatin is mainly used to absorb free moisture in frozen ice cream that improve its borproduct Q4. Processed cheese is manufactured from high quality soft cheese. Q5. Water content must not more than 5% in milk powder. Q6. Greasiness is a defect in butter may be due to excessive churning. Q7. Raw cream which is made under all a septic conditions is safe for consumption. Q8. Milk used for making cheese should be of high quality. Q9. Sesame oil must be added as identifiable oil in margarine. Q10. Spray method milk powder is more soluble and higher acceptability than roller methon Q11. By using home test, margarine gives clear supernatant on boiling Q12. Starter culture used in probiotic yoghurt included Lactobacillus bulgaricus Sterptococcus thermophilus Q13. Stirred yoghurts are types of yoghurt in which fermentation process takes place in containers. Q14. Direct vat set starter culture was considered the best form of starter culture. Q15. Foaming is a property of egg yolk while emulsification is a property of its white Q16. Late blowing in hard cheese can be controlled by microfiltration Q17. High starter culture % and / or long incubation period lead to excess acidity in yoghur 	d
 pathogens. Q2. Sandiness is a defect in ice cream due to slow cooling. Q3. Gelatin is mainly used to absorb free moisture in frozen ice cream that improve its borproduct Q4. Q18. Homogenization and sterilization are essential steps in processing of condensed milk.	
Q19. Bacteriological quality of spray dried milks is better than that of roller dried milks.	
Q20. The main cause of synersis of yogurt is the lack of stabilizers.	
Q21. Frothiness of cream is due to Torula species and / or excessive agitation.	
Q22. Ripening process mainly occurred for hard cheese	
Q23. Meat spot means a blood spot inside the egg	
Q24. Egg lipids are mainly in yolk	
Q25. Starter culture used for Roquefort cheese is Lactobacillus roqueforti	
Q26. Margarine produced mainly from 80% milk fat	
Q27. Kefir is an important type of acid alcoholic fermentation	

Q28.	Cream is obtained from milk by churning force.	
Q29.	Cultured dairy products include ice cream and yoghurt	
Q30.	Coloring matter is allowed only in cooked butter	a. 3

			Part 2	
		Choose the corre	ct answe	r (only one answer)
Q31.	What	are the types of microorganism	that can	grow in cheese?
	Α.	Yeast, mold, bacteria	C.	
	В.	mold, bacteria	D.	Bacteria
Q32.	••••••	is an example of ripened chee	ese.	
	Α.	Mozzarella	C.	Roquefort
	B.	Brie	D.	Emmental
Q33.	and iii	polysis.	mpounds	are formed in cheese as a result of proteoly
	Α.	Rendering	C.	Ripening
	В.	Ageing	D.	All the previous choices are not correct
Q34.	Eggs v	vith blood spot is fit for human	consump	tion as long as the egg is properly cooked
	Λ.	The sentence is correct	C.	The sentence is correct if "human "is replaced by "animal"
	В.	The sentence is not correct	The sentence is correct if "cooked "is replaced by "sterilized"	
Q35.		of cheese produced by		
	Α.	Renin enzyme	C.	Lipase enzyme
	B.	Lactic acid	D.	Both (A) & (B)
Q36.	The missed step in the process of manufacturing			g of cream illustrated in the flow chart is
	B. C. D.	Addition of lactic acid bacteria Standardization Clarification All the previous choices are not cor	rect.	Pasteurize 15 x 72 °C Centrifuge 50°C Skim milk Cream Missed step Pasteuriz 30 min 85°C
237.		ess is a common defect in		
	Α.	Cheese	C.	Sweetened condensed milk
	B. Butter D.			All the previous choices are not correct
238.	Bacteria of concern in the spoilage of butter are			mainly
1	Α.	Thermophile	C.	Thermoduric
	B. Psychrotrophic D.			
	В.	Psychrotrophic	D	All the previous choices are not correct

	T						
		outter		Company (A) Of Stage Comment			
	1	Cream Cheese					
	1	Il the previous choices are not correct		CERT III			
	D. 7	in the previous choices are not correct					
Q40. The beneficial effects of probiotics are							
	A.	Lower serum cholesterol		Reduce blood pressure in hypertensive			
		concentration		The same areas procedure in hyportonomo			
	B.	Increase production and	D.	All the previous choices are correct			
		bioavailability of vitamins as vit. B6,					
0.41		B12, folic acid					
Q41.	No arom	a in plain yoghurt caused by		Y			
1000	A. B.	One-sided growth of the streptococci	C.	Too short time for fermentation			
042		too low temperature of incubation	D.	1			
Q42.	ine mair	function of stabilizers in yoghurt					
	A. B.	Prevention of synersis	C.	None of them			
Q43.		Improve body and texture	D.	Both (A) & (B)			
Q45.	A.	ors inhibit the action of starter cultu		ncluded			
	B.	Antimicrobial system of milk	C.	Detergents and disinfectant			
Q44.		Seasonality of milk	All the previous choices are correct				
Q11.	a distribution of the state of						
	B.	Acidophilus milk	C.	Kefir			
Q45.	D. Note of previous choices is correct						
	A Collection of the collection		Good therapeutic benefits				
	B. Good carrier for probiotics		D.	All the previous choices are correct			
Q46.	Coarse/Id	y of ice cream caused by	D.	All the previous choices are correct			
	Α.	Insufficient total solids	C.	Insufficient stabilizer			
	B.	Slow freezing		All the previous choices are correct			
Q47.	The main	functions of emulsifying agent in i		ream manufacture are			
	A.	Smooth eating and good melting	C.	distribution of air			
		point					
	B.	Increase richness of flavor.	D.	Both (A) & (C)			
Q48.	Formatio	n of colonies or film on the surface	of y	oghurt caused by			
	Α.	Growth of yeast and mold	C.	Low solid content			
	B.	Mechanical shaking of yoghurt.	D.	All of the previous			
Q49.	49. Incorporation of air during freezing of ice cream lead to		lead to				
	A. II	ncrease volume of ice cream	C.	Increase overrun			
050	B. [Depress the melting point of ice cream.	D.	Both (A) & (C)			
Q50.	Mellorine	is type of ice cream characterized					
		Low sodium content	C.	Contain s Fat of vegetable source			
051		Contains appreciable amount of egg	D.	Both (c)&(b)			
Q51.	1. Probiotics are characterizes by the following except						

	T.					
	Α.	Non pathogenic, non toxic, non allergic and non mutagenic.	С	. Have the ability to proliferate inside the gut		
	B.	Produce antimicrobial substances	D	. Sensitive to bile salt		
Q52.	Prebio	tics particularlycan be added	com	mercially to yoghurt and fermented milk.		
	A.	Inuline.	C	Soyabean Soyabean		
	B.	Starch	D.	None of them		
Q53.	Dieteti	ic ice cream is prepared for persons	suffe	pring from		
	A.	Cardiac or circulatory diseases	C.			
	B.	Urinary diseases	D.			
Q54.	Improp	per lactose crystallization gives the	dofoc	None of previous choices is correct ts ofin the final product of condensed		
	milk.	in the same of the	ueiec	is ofin the final product of condensed		
	A.	Brown discoloration	C.	Conding		
	B.	Lumpiness	D.	Sandiness		
Q55.	All of t	he following are non-microbial defe	Thickening			
	A.	Grittiness	ects o	r condensed milk except		
	B.	Lumpiness	C.	Bloats		
Q56.	A thick, heavy cream layer is noticed at the top of the evaporated milk can when it is opened indicates					
	indicate	es	e top	of the evaporated milk can when it is opene		
	A.	Low temperature storage	C.	Correct sterilization process		
	B.	Inadequate homogenization	D	Ago thickening		
Q57.	The two	most important methods of drying	d USE	d in the dainy industry		
	7 17	Troner and druffi drying	C.	Atmospheric and vacuum drying		
	B.	Spray and roller drying.	D	Sun draina		
Q58.	The bro	wn colour in evaporated milk is cau	sed h	our drying		
	A.	High storage temperature	C.			
	B.	High sterilization temperature	D.	Longer storage period		
Q59.	Spray m	ilk powder characterized by	D.	All the previous choices are correct		
	A.	Regular oval or spherical in shape	C.	Have the come at		
	B.	A & C	D.	Have the same size		
Q60.	The majo	or difference between evaporated a	nd s	Very little occluded air		
	A.	Condensed milk has less water	C.	ondensed milk is:		
		content than evaporated milk	0.	Evaporated milk can be stored non-refrigerated,		
	B.	Condensed milk has a lower fat	D.	while condensed milk requires refrigeration		
		content than evaporated milk	D.	Condensed milk comes in smaller size container than even perstand milk.		
		40		than evaporated milk

a) Testes	b) Enididumia	0) 9-		
25. The symptom "Sh	ort estrus cycle of	0 15 30	minal vesicle	d) Prostate gland
25. The symptom "Sh form of IBR	as eyele of)-13 ua	ys length" is a	ssociated with
a) Vulvovaginal	b) Preputial		a) A1 .:	
a) BVD	is one of the viral	l digagge	c) Abortive	d) Uterine
a) BVD	b) IBR	uisease	s associated w	ith PI formation
27. Duration of courts	shin	(C)	RVF	d) EPIVAG
a) Shorter in buck that	n stallion	b) 01-		
c) Longer in buck that	n pig	(d) I	orter in pig that	n stallion
28. EPIVAG isa) Venereal abortion	dispasa con	(d) LO	nger in bull tha	ın stallion
a) Venereal, abortion	disease cau	b) NI	in in its angle in	animals
c) Venereal, no abortion	on	d) No	ne-venereal, no	abortion
9. Mycotic abortion i	S	1 u) 1101	ne-venereal, ab	ortion
1 7 7 7	\) NI -: 41 -	() ()	
0. Bloody semen indi	cates	Neithe	r (a) nor (b)	d) Both (a) and (b)
a) Seminal vesiculitis	h) Penile injum	a) Dan	-1 1 1	
1. Interruption of tes	ticular thermore	C) Ken	al calculi	d) Bad hygiene
a) Testicular hypoplasi	a cheimoregi	b) Ta-t'	occurs in	
c) Chronic orchitis		d) A	ular degenerati	ion
2. Post-sperm fraction	n of stallion some	d) Anoro	nidism	
a) Cowper's glands b	Enididumia	a) g		
3. Libido is under	/ LpididyIIIIS	c) Sem	inal vesicle	d) Prostate gland
a) Neural b) Horm				
10) 2201111	onal c) Both (a	a) and (b	d) Neit	her (a) nor (b)

34.	Bull infected with trichom	oni	asis is a	chronic ca	rrier due	to		
a)	Lowered immunity			b) Intra-cellular parasite				
	Parasite protected in preputial folds			d) All of them				
35.	Signs of constipation, dysu	ria	. arched	back and	vomiting	characterizes		
a)	Prostatitis in dogs	b) Prosta	atic hyperplasia in dogs					
				static hyperplasia in cats				
36.	Tuberculosis in the uterus	of	non-pres	nant anim	al cause	2		
a)	Failure in implantation			b) Endometritis				
b)	Metritis			d) All of the above				
37.	The cow-bull semen pH is			-) 1111 01 11	10 400 70			
	Acidic b) Alkali	ne		c) Slightly	acidic	d) Slightly alkaline		
38.	All these parameters can b		ised to as	sess the in	tensity of	f libido excent		
a)	Period after sexual satiation	T	b) Interva	al between	successiv	re ejaculations		
	Libido index		d) Numb	er of eiacul	ations un	til sexual satiation		
<u>39.</u>	Congenital diphallus will o	au	se	J		SONGER BUILDING		
	Failure of intromission			b) Locomotor dysfunction				
(c)	Disruption of the ejaculatory	y pi	rocess		d) All of them

a)	Brucellosis			b) Leptospirosis				
) Vibriosis			d) Chlamydia				
41.	On exposing the bull to ps	ych	ic shock					
a)	Pudendal nerve block is pos	re	b) Pudendal nerve block is negative					
(c)	Changing the mating stances is stimulant d) None of them							
42.	Moldy hay cause abortion	in	late preg	nant cows	characte	erized by		
a)	Fetal membranes keratinizar	1	b) Intrauterine hemorrhaging					
	Amniotic vesicle Rupture		d) None of the above					
43.	The main source of ergoth	ior	eine in s	emen is				
	Prostate gland b) Semin			c) ADD		d) Cowper's gland		
44.	Insufficient relaxation of	the	retracto	or penis m	uscle wil	l extension of		
tne	sigmoid flexure				γ			
-	Prevent b) Allow c)	В	oth (a) an	d (b)	d) Neith	ner (a) nor (b)		
	Treatment of prostatitis n		s at least					
-	one week b) 2 week			c) Four we		d) 3-5 days		
40.	Complete placentomes det	ac	hment in	case of my	ycotic ab	ortion occurs due to		
-	Early abortion			b) Loose fixation of placenta				
(C)	Severe necrosis in placentor	nes	s stalk	d) All of the	hem			
	7. Impotentia Eregenti is characterized by							
	a) Bull refusal to copulate			b) Incomplete ejaculation				
-	c) Incomplete erection			d) All of them				
	Genetic factors cause abou	rtio	n are ass					
-	a) Mole			b) Hydropsy				
-) Fetal mummification			d) Fetal maceration				
49. Equine coital exanthema is caused due to herps virus								
	Type 1 b) Type 3	7	c) Typ		d) All of	the above		
	Virgin heifers aged 1 year				eptible to			
$\lfloor a \rfloor$	Highly b) Mode	rate	ely	c) Low		d) Not		

a) Early trimester	n occurs at	*********	.0f pregnancy					
a) Burry unitester		b) Middle trin	b) Middle trimester					
c) Late trimester		1) 4 11 0 4	1) 411 0.4					
52. Abortion due to	leptospiros	sis occur	's in	bove				
a) Acute form			The state of the s					
c) Contagious form		4) (11	b) Sporadic form					
53. Cow in estrus is	used as stin	mulue in	u) Chronic for	d) Chronic form				
a) Libido index	The second of th	ulus III						
a) Tagain			b) Serving cap	b) Serving capacity test				
54 cond	dition provi	d) Libido scor	d) Libido scoring system o achieve intromission					
a) Balanitis	artion previ	ents dun	o achieve intromission					
c) Hair ring		b) Corkscrew	b) Corkscrew penis					
55. Trichomoniasis	is localized	41 T	d) All of them	d) All of them				
a) Seminal vesicles	is localized	in the bi						
c) Internal sheath of	'the		b) Prostate gla	nd				
56 The willings are	the prepuce	;	d) Bulbourethr	al gland				
56. The willingness of a) Flehmen	or eagernes	s of the	male to mount fe	emale is				
57i	s the main	hormon	e essential for m	aintenance of libido				
50 Diametica	b) FSH		c) Estrogen	d) Testosterone				
o) logu	in res	ponse to	thermal stress c	d) Testosterone auses impotentia Eregen				
a) ICSH	b) ACTH		c) Thyroxin	d) All of them				
59. PAS reaction cou a) Non-infectious	ıld help in t	he diagr	osis of	- Causes of about				
a) Non-infectious	b) Bacteria	ıl	c) Viral	d) Manual				
ov. Reproductive for	m of listeri	osis is as	sociated with	d) Mycotic				
a) Ovalitis	h) Met	atio.	\ \ \ \ \ \ \ \ \ \ \ \ \ \ \ \ \ \ \ \	vitia 1) N				
61. Fault administra	tion of intra	a uterine	drugs using out	gitis d) None of them				
	ion		b) Anestrum	c) Salpingitis d) None of them drugs using catheters results in:				
c) Abortion			J) A11 C.1 1					
62. RVF induced wide a) Prevent vit K abso	le-spread h	aemorrh	ages in about 1	ove				
	TOUGH IN SV	HIDECTE		ietus due to				
c) Reduce certain clotting factors formation			on h., 1:	b) Thrombocytopenia				
a) Sarcocyst b	in shape o	ranian	on by nver	d) All of the above				
a) Sarcocyst b	Trichomon	1 gallisili	cause abortion	n all animals is				
64. Laboratory diagn	osis of pro	itatitia in	c) Neospora	d) Toxoplasma				
a) CBC	. 0515 01 p1 05	b) A see	iciuae					
d) Evaluation of PSA		d) Asse	ssment of prostat	ment of prostatic acid phosphatase				
5. In case of polyic o	0777	(11) (3) (1)	T thomas					
a) Sexual rest for two	ompound i	ractures	of breeding bull	, is recommended				
a) Sexual rest for two weeks b) Balanced ration Systemic antibiotics and anti-inflammatory treatment b) None of them								
6 The hull offers	s and anti-ii	nflamma	tory treatment	4\ > ~				
6. The bull after a w	eek of infec	tion wit	h trichomoniasis	show				
a) benimal vesiculius		b) Epididymitis	p) Epididymitis					
c) Balanoposthitis		d) None of them						
7. Libido is under th								
a) Genetic makeup	b) Environn	nent c)	Both (a) and (b)	d) Neither (a) nor (b)				
8. Conjunctival form a) Listerioses	is a form (of	disease car	use abortion				
7			b) BVD	andi tidii				
c) Brucellosis		I) IBR						

oz. immunologicai i	niertility occurs due	to fo	rmat	ion of anti	hadiag against				
a) munisic and surr	a) Intrinsic and surface sperm antigens				b) Surface and coating antigens				
c) Intrinsic and coat		d) All amount :							
70. Pheromones stin	nulate the male sexu	al de	sire t	hrough	lugens				
a) Gustatory	1 D) Auditory	(1)	al desire through stimuli c) Visual						
71. "Test and slaugh	iter method" is used	for	ontro	ol of:	d) Olfactory				
a) Toxoplasmosis	1. "Test and slaughter method" is used a) Toxoplasmosis				b) Listeriosis				
b) Leptospirosis				d) Brucellogie					
72. Sluggish libido i	n association with m	illate	ral to	etionles es	Jan's A Th				
a) Changing of tease	er/cow	11144	ilateral testicular aplasia treated by						
c) Administration of	high protein diet		b) Administration of andro						
73. Blue tongue viral infection is due to									
a) Vascular endothe	lial damage	h) F	h) Plack are and						
c) Destruction in the	genital tract	4) E	b) Block progesterone production by CL						
74. Silage is a source for infection of									
a) Circling disease	Circling disease								
c) Enzootic abortion		b) Epizootic Bovine Infertility							
	Entrance of trichomonas to pregnant				d) Contagious equine abortion				
a) Collagenase enzy	Collagenase enzyme			b) Data 1					
c) Mucinase enzyme	3	b) Dehydrogenase enzyme							
76. Semen in bull wit	th unilatoral anidida	a) P	d) All of the above nal segmental aplasia is characterized by						
a) Normospermią	b) Oligospermia	mais	c) Azoospermia d) Aspermia						
77. One of the follow	ving actions does not	bala.	AZOOS	permia	d) Aspermia				
a) Mounting	b) Intromission	Delo	ng to	copulator					
78. Presence of giant	cell spermetogonic	c) E	jacura	ation	d) Refractoriness				
a) Testicular hypopl	asia								
c) Testicular degene	2) Testicular degeneration			b) Epididymitis					
79. Scrotal nauches	9. Scrotal pouches are asymmetrical in			d) Cryptorchidism					
a) Unilateral testicul	ar enlogio		*1 /	1					
c) Unilateral segmen) Unilateral testicular aplasia) Unilateral segmental aplasia			b) Bilateral testicular hypoplasia					
80. Fructose is a cho	d) Both (a) and (c) or function								
a) Epididymal	h) Vosiovi-	or		func					
a) Diddyllial	b) Vesicular	(c) P	rostat	tic	d) Testicular				

Good Luck for All
