Abstract

Budd-Chiari syndrome is a heterogeneous group of disorders characterized by hepatic venous outflow obstruction. Thrombolytic therapy may be useful in patients with acute Budd-Chiari syndrome. In this report, a 29 year-old lady with acute Budd-Chiari syndrome secondary to antiphospholipid syndrome with occlusion of the hepatic veins and the inferior vena cava (IVC). Local administration of recombinant tissue plasminogen activator(t-PA) was given through IVC and hepatic artery. Complete reca
